

safeGuard

A proactive service designed to protect your IT Infrastructure.

for Storage

Downtime Costs Money. Prevent it.

Paragon's SafeGuard Services for Storage will quickly and accurately provide a comprehensive view of what is adversely affecting your storage environments. Business downtime costs money and SafeGuard Services from Paragon will help ensure your storage infrastructure meets its Service Level Agreements (SLA's), I/O throughput and utilization objectives.

Optimize and Exceed Your Potential.

You may not have the time or resources to regularly validate if your storage environment is designed and managed to meet SLA's, I/O throughput and utilization objectives. Like many organizations, you may have expanded rapidly to keep pace with ever-changing business demands. Rapid change and expansion, with the ongoing pressure of resource constraints, can result in storage environments that are not optimally utilized, configured and managed to meet your company's objectives.

See the Big Picture.

Paragon's SafeGuard Services for Storage provide a comprehensive review of your storage infrastructure in order to proactively detect abnormalities that may be keeping your storage infrastructure from meeting defined objectives. Paragon will identify and document the gaps in your storage configuration, components and system patch levels that prevent your storage infrastructure from meeting SLA's and providing optimal utilization and throughput.

Comprehensively Powerful Assessments.

The deliverable from Paragon's SafeGuard assessment is a document highlighting:

- Current state
- Identified issues with current environment
- Actionable recommendations for improvement
- Ongoing best practices recommendations

Why Paragon?

In addition to its extensive design, integration and support expertise with complex server, storage, high availability and enterprise backup solutions, Paragon offers strong technical proficiency in server and storage virtualization solutions. Combine that with our project management, proven methodology and depth of technical expertise, our SafeGuard offering will ensure your company's storage assets are meeting SLA's and providing optimal throughput and utilization.
